

Modulised fresh water systems

Hatenboer-Water started to produce modules fresh water systems in the early 90's of the last century, on demand of Dutch shipyards. The yards required a higher efficiency in building their ships in order to be competitive.

They discovered that they could work more efficiency when using modulised equipment. By using these modules they saved time on engineering and installation of the equipment.

Hatenboer-Water has its own engineering department and fully equipped work shop for design and production of the modulised systems. For these modules high-quality components are used which

are interconnected with for the purpose suitable piping. All electrical parts are pre-wired to a local power control panel. Further the modules are equipped with all necessary interface connections.

HATENBOER - WATER

Modulised fresh water systems

Different types of modules are available:

- Cold fresh water hydrophore & treatment modules.
- Complete cold & hot water hydrophore & treatment modules.
- Hot water modules.

hot water module

Our modules are installed on:

- Offshore installations
- Offshore support ships
- Dredging vessels
- Commercial oceangoing ships
- Navy ships
- Mega yachts
